TWAIN Member Company P3iD Technologies to Offer TWAIN Direct API as Professional Hosted Web Service

solution provides developers a means to accelerate incorporation of network and cloud scanning applications

Raleigh, NC – October 26, 2023 – The TWAIN Working Group (TWG), a not-for-profit organization providing and fostering a universal public standard for image acquisition devices, announced today that member company P3iD Technologies is now offering the TWAIN Direct API as a professional hosted web service. This service will simplify the adoption and development of the TWAIN Direct standard within scanning applications.

TWAIN Direct is a free, open-source standard that eliminates the need for users to install vendor-specific drivers to communicate between scanning devices and image-capture software applications. It supports direct network communication between mobile and/or desktop applications and scanning devices, including cloud platforms. TWAIN Direct addresses the need for something simple and direct that expedites application development and results in a feature-rich end-user scanning experience.

The TWAIN Direct API hosted service offering is available for any commercial organizations or businesses, as well as new and existing TWAIN Working Group members, students, and non-profit organizations.

The benefits of P3iD's hosted TWAIN Direct API include:

· Zero IT involvement for setup, configuration, or maintenance
· Ability to begin development within minutes
· Additional resources and web services API for a complete solution

"This new TWAIN Direct API web service offering greatly accelerates the time to complete document scanning software development projects by eliminating the need to install, deploy or maintain the infrastructure required to create a production level TWAIN Direct application," said Joseph Odore, TWAIN Working Group Chair. "ISVs that have been contemplating TWAIN Direct development should seriously consider this service as a fast track to deployment."

For more information or questions, please contact P3iD Technologies **twaindirect@p3idtech.com** or 408-785-2005.

About The TWAIN Working Group
The TWAIN Working Group, established in 1992, is a not-for-profit association of industry leaders who have gathered to create a standard that benefits the imaging industry as a whole. TWAIN's purpose is to provide and foster a universal public standard which links applications and image acquisition devices. The ongoing mission of this organization is to continue to enhance the standard to accommodate future technologies. TWAIN generates multiple opportunities for application developers and users to access information and broaden the standard; through a developer's forum, main website and online self-certification process. Current members of the TWAIN Working Group include P3iD Technologies, Inc., ExactCODE GmbH, PFU America Inc., Kodak Alaris, InoTec – a Datawin GmbH brand, Plustek, Inc., Atalasoft, Microtek, Inc., Dynamsoft, Epson America, Inc., LEAD Technologies, Hewlett Packard and PDF Association. More information about Developers Day participation and sponsorship, PDF/R, the TWAIN API and imaging standards can be obtained at pdfraster.org, twain.org and twaindirect.org.
